## 1 INTRODUCTION

This Highway Safety Inspection Manual (Manual) dated 09 December 2025 replaces all previous versions produced by the London Borough of Newham – see Version Control section above for details.

### 1.1 Background

This Manual describes the inspection and reporting requirements for highway safety inspection within the London Borough of Newham (the Council).

The Manual and its application support the Council in delivery of its statutory obligation to maintain the highway (Highways Act 1980, Section 41), ensures a standard of maintenance appropriate for the highway network, builds a knowledge base on network condition and delivers against the Council's policies in providing a safe highways network.

### 1.2 Purpose of Inspections

The primary purpose of this Manual is to ensure that the highway is safe for all users and to provide a reference text for the highway asset management team. It also serves as a useful document for other Council departments and stakeholders highlighting the extent of the highway's safety inspection regime.

### 1.3 Reference Documents

The Manual has been prepared by direct reference to the following documents:

- (1) Highways Act 1980 - [Highways Act 1980](#)
- (2) Well Managed Highway Infrastructure: A Code of Practice (UKRLG 2016), and all documents referred to therein (the Code)\* - [The Code of Practice](#)
- (3) Well Managed Highway Liability and Risk Guidance (IHE 2019), and all documents referred to therein - [IHE 2019](#)
- (4) Highway Infrastructure Asset Management Guidance\* - [Asset Management Guidance](#)

\* The Code recommends that:

*This Code, in conjunction with the UKRLG Highway Infrastructure Asset Management Guidance, should be used as the starting point against which to develop, review and formally approve highway infrastructure maintenance policy and to identify and formally approve the nature and extent of any variations. [HIAMG recommendation 1]*

## 2 DOCUMENT PRODUCTION & BUSINESS IMPROVEMENT

The Manual has been developed by the Council and its nominated document owner in close consultation with the highway asset management team, the Council will continue to develop the Manual in a manner that supports its ongoing commitment to setting requirements, making decisions and reporting performance.

### 2.1 Commitment to Business Improvement

The Council recognise that it is important for the inspection process and procedure to be applied consistently by each highway safety inspector. The Council also recognise that consistency will need to be managed in a collaborative manner for implementation of the safety inspection regime to be a success.

The Council will establish a highway safety inspection group, the core group consisting of the highway asset manager, highway safety inspectors and representation from the other Council departments. The team will meet formally on a quarterly to discuss the Manual and safety inspection performance.

The agenda for the highway safety inspection group will include:

- Highway safety inspection network hierarchy.
- Inspection frequency, including enhance inspection requirements.
- Process and procedure for recording defects.
- Defect risk assessment and reporting consistency.
- Defect investigatory levels.
- Consideration of feedback / requests received from other Council departments.
- Asset Management System (AMS) improvements (mobile and desk top provision).

The highway safety inspection group will take minutes and record actions at each meeting. Any actions resulting from the meetings will be passed to the Council's nominated Manual owner.

### 2.2 Working with Relevant Stakeholders

The Council is committed to close working with all relevant stakeholders so experience and ideas can be considered when further developing the Manual, any feedback garnered from stakeholders either directly or by lessons learnt during delivery of the service will be considered when the document is being updated – see section 2.4 below.

### 2.3 Working with Other Authorities

The Manual has been developed by the document owner in close consultation with practitioners working with other London Boroughs. The Council is committed to close working with other London Boroughs so experience and ideas can be considered when further developing the Manual.

## 2.4 Quality Audits

A quality audit will be completed annually ([in November]) by the Council's highway management team. The core aims of each quality audit shall review the Council's:

- Approach to highway safety inspection network hierarchy.
- Inspection frequency.
- Process and procedure for recording defects.
- Process for defining defect investigatory levels.
- Approach to defect risk assessment and reporting.
- Inspection team competency and training needs.

The audit will also review the minutes and actions proposed and delivered in the safety inspection business improvement meetings.

The quality audit will generate a report and, if applicable, make recommendation on Manual the updates and improvements.

## 2.5 Document Reviews and Updates

### 2.5.1 Ongoing Minor Update

The Manual will be routinely reviewed and updated on an ongoing basis by the Council's nominated Manual owner in response to requests for change(s) made by the Council's highway safety inspection group.

### 2.5.2 Annual Update

The Manual will be routinely reviewed and updated annually by the Council's nominated Manual owner - for details see the version control section at front of the Manual.

The Manual review and update will consider recommendation(s) made by the Council's highways management team, annual quality audit and highway safety inspection group.

### 3 HIGHWAY NETWORK HIERARCHY

#### 3.1 Hierarchy Determination

In line with the recommendation given in the Code the Council has determined its network hierarchy based on network elements and stakeholder use. The steps followed when assigning the hierarchy is outlined below.

##### *Step 1 – Defining network categories*

A network category framework has been developed. There are five (5) network categories as described in the table below.

Table 1 – Network Categories

Network Category	Description
1	Trunk Road*
2	Main Distributor
3	Secondary Distributor
4	Link Road
5	Local Access Road

*\*Mainly the A13, A406 and A117 Woolwich Manor Way, inspected and maintained by TfL*

##### *Step 2 – Establish the network features*

The Council has identified the network features by type for consideration based on stakeholder use on each road. The network features identified by the Council are as described in the table below.

Table 2 – Network Features

Network Feature	Descriptions
Traffic Volume	Road category and traffic flow data
Traffic generators	City Centre, Schools, railway stations, industrial estates
Cyclists	Cycle route traffic flow and type (eg, on road, not on road)
Buses	Bus route information and buses on road per hour
Risk	Historical insurance claim risk
Other uses	Events, GP surgeries, hospitals, etc.,

##### *Step 3 – Assigning network categories*

A network feature description for each network category has been assigned as described in the table below.

Table 3 – Network Features

- Carriageway Hierarchy

Criteria	Network Use	Description	Network Category
Prestige Network	Trunk Road	Transport for London Road Network, Strategic Road Network, maintained by TfL	1
Traffic volume	Main Distributor	Main distributor 'A' road, very high pedestrian movement, or need based on local knowledge	2
Traffic generators		School ≥1500 pupils, City / town centre, Railway stations >9m passengers p.a.	
Cyclists		If 'high traffic' and a dedicated cycle lane exist	
Buses		Buses ≥50 per hour	
Risk		Very high risk may be no claims history evidence, but local knowledge prevails	
Other uses		Essential service - based on local knowledge	
Traffic volume	Secondary Distributor	Secondary distributor 'A' road, high pedestrian movement, or need based on local knowledge.	3
Traffic generators		School ≥500 ≤1499 pupils, railway stations ≥4 ≤9m passengers p.a., district centres	
Cyclists		Based on local knowledge	
Buses		Buses ≥15 ≤50 per hour	
Risk		Settled / open compensation claims ≥5 p.a.	
Other uses		Event venues	
Traffic volume	Link Road	'B' & 'C' traffic distributor / Link Roads	4
Traffic generators		School ≤500, Railway stations <4m passengers p.a., Strategic industrial areas (HGV use), Place of worship	
Cyclists		National cycle network - Quietways	
Buses		Buses <15 per hour	
Historic risk		Settled / open compensation claims <5 p.a.	
Other uses		Vulnerable users - Care home, GP surgery, etc.,	
Traffic volume	Local Access Road	Local access / minor roads	5
Traffic generators		None identified	
Cyclists		Not a defined cycle network- Quietway	
Buses		Not on a bus route	

Historic risk	Newly resurfaced carriageway or footway	
Other uses	None identified	

- Footway Hierarchy

Criteria	Network Use	Description	Network Category
High Profile	Prestige Walking Zone	Transport hubs i.e. Meridian Square	1
Very High Pedestrian Volume	Primary Walking Route	Local Knowledge	2
Traffic generators		School ≥1500 pupils, City / town centre, Railway stations >9m passengers p.a.	
Other uses		Essential service - based on local knowledge	
High pedestrian movement	Secondary Walking Route	Local Knowledge	3
Traffic generators		School ≥500 ≤999 pupils, railway stations ≥4 ≤9m passengers p.a., district centres	
Cyclists		Based on local knowledge	
Medium Pedestrian Volume	Link Footway	'Local Knowledge	4
Traffic generators		School ≤500, Railway stations <4m passengers p.a., Strategic industrial areas (HGV use), Place of worship	
Cyclists		Based on local knowledge	
Low Pedestrian Volume	Local Access Footway	Local access	5
Traffic generators		None identified	
Cyclists		Based on local knowledge	

Please note that Cycle Routes will be covered under Footway Hierarchy.

Network hierarchy has been determined by assigning a network category to each road section length. The assessment has been carried out by application of a desk-top review using available data.

#### *Step 4 – Applying to the network*

A full network hierarchy has been determined by assigning a network category to each road section length. The assessment has been carried out by application of a desk-top review using available data and listed in Appendix B

## 3.2 Continuous Improvement

The network categories assigned by the first (step 4) assessment is not definitive, this is a living assessment that should be updated continuously based on stakeholder recommendation and network functional change of use & new developments.

If any member of the highways identifies a road that requires an enhanced level of inspection on a temporary or permanent basis then the road will be re-categorised accordingly.

In addition to ongoing updates the Council will use available data and reports to review the network categories applicable to each road section length on an annual basis.

## 4 SCOPE OF INSPECTIONS

These Manual details the process for the identification and repair of highway safety defects.

### 4.1 Items to be Inspected

The highway assets included within highway safety inspections will include, but will not be limited to, the following:

- Carriageway
- Footways & footpaths
- Cycleways & Cycle routes
- Kerbs
- Road Studs
- Non-illuminated traffic signs
- Bollards
- Pedestrian crossings
- Edgings
- Lighting columns\*\*
- Illuminated signs
- Wall mounted street lighting
- Street name plates
- Street furniture
- All other lighting units
- Fences and barriers
- Channels
- Gullies
- Road Studs
- Iron work
- Trees Hedges and Vegetation
- Kerbing
- Road markings
- Boundary walls and fences
- Highway general
- Pedestrian guardrails
- barriers
- Signs
- Car Parks (within the highway boundary)
- Foot bridges\*
- Subways\*
- Bridges\*

\* Will be inspected visually only and structures team will be notified if any issues identified

\*\* Will be inspected visually only and the lighting team will be notified of any issues identified

### 4.2 Exclusions

This Manual excludes policy requirements for the following assets

- Winter maintenance
- Highway Lighting
- Traffic Signals (TfL maintained assets)
- Street works e.g. Section 81 notices
- Structures
- Un-metalled Public Rights of Way
- Highway improvement and developments
- TfL highway's.

## 4.3 Continuous Improvement

The scope of inspection will be reviewed and updated on an ongoing basis as part document production & business improvement commitment made by the Council in section 2 (Document Production & Business Improvement).

.

## 5 INSPECTION FREQUENCY & PROGRAMME

### 5.1 Routine Safety Inspections

The Council has defined a routine safety inspection frequency applicable to each network category as described in the table below.

Table 4 – Routine Inspection Regime

Network Category	Carriageway	Footway (including cycle routes)	Inspection Frequency
1	Trunk Road *	Prestige Walking Zone	Two (2) weeks
2	Main Distributor	Primary Walking Route	One (1) month
3	Secondary Distributor	Secondary Walking Route	Three (3) months
4	Link Road	Link Footway	Six (6) months
5	Local Access Road	Local Access Footway	Twelve (12) months

\* Mainly the A13, A406 and A117 Woolwich Manor Way, inspected and maintained by TfL

### 5.2 Enhanced/Reduced Level Safety Inspections

The Council may programme an enhanced or reduced level of safety inspection frequency on a temporary basis in response to any one of the following:

- Operational review by asset management team
- Reports or complaints from network stakeholders (eg, the emergency services and other organisations)
- Community concern, namely reports or complaints from members of the public
- Post-adverse weather conditions
- Pre- winter service inspection on already defined gritting routes
- Temporary diversion routes (especially bus routes)
- Minor network incidents
- Recently resurfaced carriageway or footway
- Local event, elections etc

Enhanced inspections will be recorded by temporarily changing the network category defined by application of the assessment described below.

## 5.3 Inspection Programme

### 5.3.1 Routine Inspection Programme

Routine safety inspections will be programmed by the asset management team for each road section by reference to the safety inspection frequencies detailed within this section.

### 5.3.2 Enhanced Inspection Programme

Locations subject to an enhanced level of safety inspection frequency on a temporary basis shall be recorded on a supplementary schedule and programmed for completion by the highway safety inspector responsible for the area.

### 5.3.3 Missed Inspections

If highway safety inspections are missed for reasons beyond the Council's control (for example, highway safety inspector absence, highway incidents or adverse weather) inspections will be re-programmed for completion by the highway safety inspector for the month that follows the due date.

If highway safety inspections are missed the reason for missing the inspections will be recorded on the Council's asset management system.

## 5.4 Continuous Improvement

Inspection frequencies and the associated programmes will be reviewed and updated on an ongoing basis as part document production & business improvement commitment made by the Council in section 2 (Document Production & Business Improvement).

## 6 DEFECT INVESTIGATORY LEVELS

### 6.1 Investigatory Levels

The Council has established and recorded investigatory levels for highway safety inspections. The investigatory levels are described in the table below.

The 'investigatory level' is not an intervention level. The term 'investigatory level' has been used deliberately to remove any expectation that a repair (intervention) will automatically take place when an investigatory level has been reached.

If an inspection reveals that investigatory levels have been reached or exceeded a risk assessment will be carried out to determine the risk (for details, see section 7 (Defect Assessment). If the requirement for a repair (intervention) is determined the highway safety inspector will instruct the works by assigning the appropriate priority and response / repair time also detailed in section 7.

### 6.2 Continuous Improvement

Investigatory levels will be reviewed and updated on an ongoing basis as part document production & business improvement commitment made by the Council in section 2 (Document Production & Business Improvement).

Table 5 – Investigatory Levels

## Carriageway

Item	Asset Type	Defect Definition	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Likelihood	Description	Score	Consequence	Description	Risk Score	Response Time
1	Carriageway	Tripping hazards	An abrupt level difference in the carriageway.	Depth <10mm	Depth >20mm ≤30mm		1	Very unlikely	1	Insignificant	1	No action required	
				Depth >10mm ≤20mm			1	Very unlikely	2	Minor	2	No action required	
				Depth >20mm ≤30mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time	
				Depth >30mm ≤40mm			3	Fairly unlikely	4	Major	12	Investigate & assign response time	
				Depth >40mm			4	Likely	4	Major	16	Investigate & assign response time	
							Likelihood			Consequence			
Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)	
2	Carriageway	Pothole (carriageway running lanes)	Hole in road surface that measures > 200mm when measured in any horizontal plane).	Depth <25mm	Depth >40mm ≤50mm		1	Very unlikely	1	Insignificant	1	No action required	
				Depth >25mm ≤30mm			1	Very unlikely	2	Minor	2	No action required	
				Depth >30mm ≤40mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)	
				Depth >40mm ≤50mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time	
				Depth >50mm			4	Likely	4	Major	16	Investigate & assign response time	

Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Likelihood	Description	Score	Consequence	Description	Risk Score	Investigatory Level (Status)
3	Carraigeway	Depressions and Humps	Depression or hump in road surface that measures > 1200mm (longitudinally), 300mm (transeveraly).	Depth <25mm	Depth >40mm ≤50mm		1	Very unlikely	1	Insignificant	1	No action required	
				Depth >25mm ≤30mm			1	Very unlikely	2	Minor	2	No action required	
				Depth >30mm ≤40mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)	
				Depth >40mm ≤50mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time	
				Depth >50mm			4	Likely	4	Major	16	Investigate & assign response time	
4	Carraigeway	Surface cracking and gaps (carraigeway running lanes)	Longitudinal or transverse crack in surface which extends for a reasonable distance with a width >100mm.	Depth <25mm	Depth >40mm ≤50mm		1	Very unlikely	1	Insignificant	1	No action required	
				Depth >25mm ≤30mm			1	Very unlikely	2	Minor	2	No action required	
				Depth >30mm ≤40mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)	
				Depth >40mm ≤50mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time	
				Depth >50mm			4	Likely	4	Major	16	Investigate & assign response time	
Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Likelihood	Description	Score	Consequence	Description	Risk Score	Investigatory Level (Status)

5	Carraigeway	Rutting / Crowning (carraigeway running lanes)	Longitudinal depression in carraigeway extending for a reasonable distance with a width >100mm., normally in vehicle wheel track.	Depth <25mm	Depth >75mm ≤100mm		1	Very unlikely	1	Insignificant	1	No action required
				Depth >25mm ≤50mm			1	Very unlikely	2	Minor	2	No action required
				Depth >50mm ≤75mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
				Depth >75mm ≤100mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time
				Depth >100mm			4	Likely	4	Major	16	Investigate & assign response time
Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)
6	Carraigeway	Road markings (across the carraigeway)	Stop, giveaway, box junction, keep clear.	Very little wear	Barely visible		1	Very unlikely	1	Insignificant	1	No action required
				Marginal – some visible wear, larger bare spots			1	Very unlikely	2	Minor	2	No action required
				Visible, but has randomly spaced small bare spots			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
				Barely visible			3	Fairly unlikely	4	Major	12	Investigate & assign response time
				Non-existent, residue only			4	Likely	4	Major	16	Investigate & assign response time
Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)

7	Carraigeway	Road markings (along the carraigeway)	Edge centre line, hazard warning line, double white line, diagonal hatched white line, lane line, bus lane, cycle lane, speed cushions.	Very little wear	Barely visible		1	Very unlikely	1	Insignificant	1	No action required
				Marginal – some visible wear, larger bare spots			1	Very unlikely	2	Minor	2	No action required
				Visible, but has randomly spaced small bare spots			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
				Barely visible			3	Fairly unlikely	4	Major	12	Investigate & assign response time
				Non-existent, residue only			4	Likely	4	Major	16	Investigate & assign response time
Item		Defect Definition	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)
8	Carraigeway	Road markings (edge of carraigeway or on kerb)	Double yellow line, single yellow line, single white line, bay markings, no loading, loading bays.	Very little wear	Barely visible		1	Very unlikely	1	Insignificant	1	No action required
				Marginal – some visible wear, larger bare spots			1	Very unlikely	2	Minor	2	No action required
				Visible, but has randomly spaced small bare spots			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
				Barely visible			3	Fairly unlikely	4	Major	12	Investigate & assign response time
				Non-existent, residue only			4	Likely	4	Major	16	Investigate & assign response time

# Highways Safety inspection Manual

Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Likelihood	Description	Score	Consequence	Description	Risk Score	Investigatory Level (Status)
9	Carraigeway	Road Studs (carraigeway running lanes)	Road stud wear,corrosion, damage, missing.	Single road stud settled below their specified level Single missing or damaged stud (no legal requirement) More than 1 missing in any 5 consecutive studs n/a n/a	More than 1 missing in any 5 consecutive studs		1	Very unlikely	1	Insignificant	1	No action required	
							2	Unlikely	2	Minor	4	Record issue (if any) for next inspection	
							3	Fairly unlikely	3	Moderate	9	Investigate & assign response time	
							1	Very unlikely	1	Insignificant	1	No action required

Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)
6	Pedestrian Route	Surface cracking & gaps (dedicated pedestrian crossing points)	Longitudinal or transverse crack in surface which extends for a reasonable distance.	Depth <10mm	Depth >20mm ≤30mm		1	Very unlikely	1	Insignificant	1	No action required
				Depth >10mm ≤20mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
				Depth >20mm ≤30mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time
				Depth >30mm ≤40mm			4	Likely	4	Major	16	Investigate & assign response time
				Depth >40mm			4	Likely	4	Major	16	Investigate & assign response time
Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)
7	Pedestrian Route	Raised tree roots within tree pits (footway or footpath)	Tree roots expansion / raising within pit causing rasied roots	Some evidence of movement but no cracking or raised paving.	Extensive cracking or raised paving. Represents a tripping hazard of >20mm	Extensive cracking or raised paving. Represents a tripping	1	Very unlikely	2	Minor	2	No action required

		and/or damage to the highway.	Some minor cracking or slightly raised paving. Represents a tripping hazard of <10mm	outside normal pedestrian route.	hazard of >20mm within normal pedestrian route.	2	Unlikely	2	Minor	4	Record issue (if any) for next inspection
			Some cracking or slightly raised paving. Represents a tripping hazard of <20mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
			Extensive cracking or raised paving. Represents a tripping hazard of >20mm outside normal pedestrian route.			4	Likely	4	Major	16	Investigate & assign response time
			Extensive cracking or raised paving. Represents a tripping hazard of >20mm within normal pedestrian route.			5	Very Likely	4	Major	20	Investigate & assign response time

## Cycle Route

Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Likelihood		Consequence			
Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)
1	Cycle Route	Tripping hazards	An abrupt level difference in the cycle way or path	Depth <10mm	Depth >20mm ≤30mm		1	Very unlikely	1	Insignificant	1	No action required
				Depth >10mm ≤20mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
				Depth >20mm ≤30mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time
				Depth >30mm ≤40mm			4	Likely	4	Major	16	Investigate & assign response time
				Depth >40mm			4	Likely	4	Major	16	Investigate & assign response time
Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Likelihood		Consequence			
2	Cycle Route	Pothole (cycle running lanes)	Hole in road surface that measures > 200mm when measured in any horizontal plane).	Depth <25mm	Depth >30mm ≤40mm	Depth >50mm	1	Very unlikely	2	Minor	2	No action required
				Depth >25mm ≤30mm			2	Unlikely	3	Moderate	6	Investigate & assign to enhanced inspection (if applicable)
				Depth >30mm ≤40mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time
				Depth >40mm ≤50mm			4	Likely	4	Major	16	Investigate & assign response time
				Depth >50mm			5	Very Likely	4	Major	20	Investigate & assign response time

# Highways Safety inspection Manual

Item	Asset Type	Defect	Defect Description	Defect Variable	Investigatory Level	Emergency Level	Score	Description	Score	Description	Risk Score	Investigatory Level (Status)
3	Cycle Route	Surface cracking and gaps (cycle running lanes)	Longitudinal or transverse crack in surface which extends for a reasonable distance with a width >100mm.	Depth <25mm	Depth >30mm ≤40mm		1	Very unlikely	2	Minor	2	No action required
				Depth >25mm ≤30mm			1	Very unlikely	3	Moderate	3	Record issue (if any) for next inspection
				Depth >30mm ≤40mm			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time
				Depth >40mm ≤50mm			4	Likely	3	Moderate	12	Investigate & assign response time

17	Highways General	Traffic Signal (including pedestrian call points, posts, signal heads, brackets)	Damaged traffic signal installation - twisted / bent / loose / missing	No evidence of damage	Damage not effecting integrity of installation - but light not operating as intended.	Damage directly effecting integrity of installation - traffic signal could fall. Signal head loose or hanging.	1	Very unlikely	1	Insignificant	1	No action required
				Damage not effecting integrity of installation and light operating as intended.			2	Unlikely	1	Insignificant	2	No action required
				Damage not effecting integrity of installation - but light not operating as intended.			3	Fairly unlikely	3	Moderate	9	Investigate & assign response time

				Damage directly effecting integrity of installation - traffic signal could fall but it will get worse over time.			4	Likely	4	Major	16	Investigate & assign response time
				Damage directly effecting integrity of installation - traffic signal could fall. Signal head loose or hanging.			5	Very Likely	5	Catastrophic	25	Investigate & assign response time

*Structures, subways and Footbridges will be inspected visually only and structures team will be notified if any issues identified*

## 7 DEFECT ASSESSMENT

### 7.1 Defect Priorities & Response Times

The Council has established and recorded defect priorities and response times for highway safety inspections, see table below.

Table 6 – Defect Priorities

Priority Code	Priority	Response / Repair Time	Description	Prime Considerations
P1	Emergency (very high)	2 hours	Make safe	Dangerous and/or likely to cause major disruption. Normally a temporary repair. May need reassigned priority after temporary repair.
P2	Urgent (high)	24 Hours	Make safe  <span style="color: orange;">With discretion 3 days being allowed for some repairs</span>	Could be a temporary or permanent repair. May need reassigned priority after temporary repair. Street-works permit requirement.
P3	Non-urgent (high)	10 Calendar days	Permanent repair	Materials available or easy to procure. Street-works permit requirement.
P4	Non-urgent (high/medium)	28 Calendar days	Permanent repair	Additional time for allocation for materials procurement. Street-works permit requirement.
P5	Non-urgent (low)	No response	No action will be taken other than recording the defect	Make a note of the defect arrange follow up inspection  Defects in this category may include faded road markings that are not dangerous that may be included in a planned maintenance programme

Important Note; Priority codes and their associated response times will be assigned to defects based on the risk assessment application process detailed within this section below.

## 7.2 Undertaking Risk Assessments

### 7.2.1 Corporate Policy

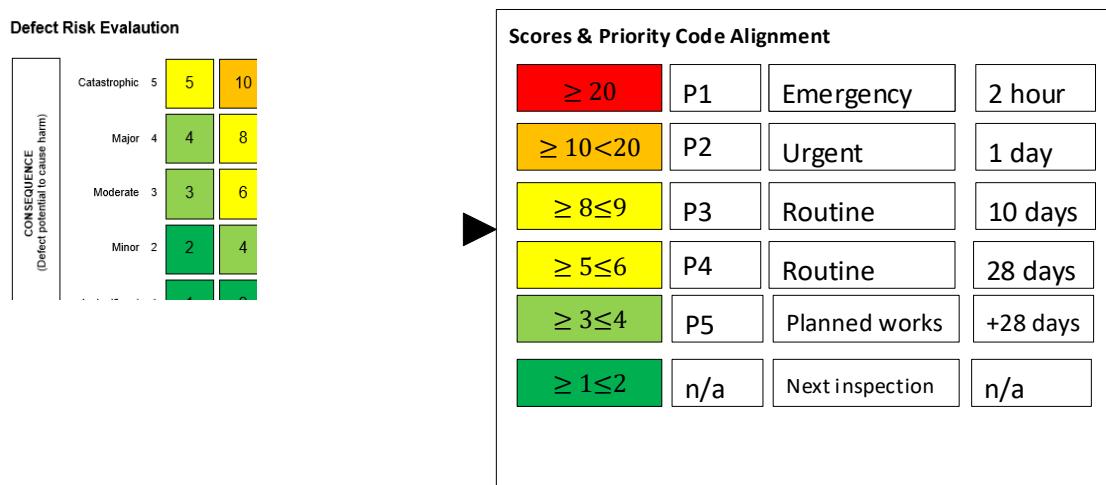

The Council has a Corporate Health & Safety Policy (Risk Assessment Policy) which sets out what is expected of managers and employees and explains the process of risk assessment for the management of health and safety risks leading to the control of all elements of risk in the workplace.

The process for 'undertaking a risk assessment' on the highway as part of the safety inspection regime is the same in principle to the Council policy and should be referred to in full – see document ref: LBN Risk Assessment Policy (updated June 2022). For the purpose of the HSIM, the four by four matrix is replaced for five by five matrix, but follows the same guidelines.

### 7.2.2 Risk Assessment Application

When assessing the risk associated with any given defect the highway safety inspector will assign a priority code and response based on the score derived by application of the risk matrix detailed within the Council's risk assessment corporate policy – see figure below.

Figure 2 – Risk Assessment Aligned with Response

Note; defects recorded as  $\geq 1 \leq 2$  will be recorded by the highway safety inspector on the Council's asset management system.

## 7.3 Principles of Risk Assessment

### Carriageways

- *potholes etc:*
  - the greater the severity of defect, the greater the impact
  - the greater the traffic flow, the higher the probability
  - on distributor roads, channel risks based on cyclists, with other risks based on motor vehicles
  - on local roads, channel risks also based on cyclists – although assumed higher flow, lower probability due to parked vehicles reducing channel usage
  - on local roads, other risks based on motor vehicles – increased centre line risk probability higher due to parked cars causing a higher flow on the centre line
  - risks assessed on all categories for motor cyclists, but although impact risks could be higher, probability risks considerably lower due to less traffic flow and increased manoeuvrability, thereby resulting in a higher risk factor for motor vehicles
  - risks assessed on all categories for pedestrians and although it is accepted that pedestrians can cross carriageways at will, it is assessed that most are channelled across at controlled points, thereby resulting in a very low probability elsewhere on any category – the outcome being a higher risk factor for other modes of travel.
- *gap/crack:*
  - impact as for potholes
  - transverse – on local roads, probability increased for wheel track & centre line risks due to parked car issue.
- *rutting/crowning:*
  - impact and probability as for potholes.
- *dislodged kerb:*
  - impact as for potholes – risks based on cyclists for distributor roads and motor vehicles for on street parking on local roads
  - probability lower than for potholes – based on cyclists for distributor roads and motor vehicles parking on local roads.

### Footways

- *trips etc:*
  - the greater the pedestrian flow, the higher the probability
  - impact remains the same irrespective of the defect severity
  - impact for vulnerable usage higher than for normal usage, due to higher possibility of and severity of injury
  - probability for vulnerable usage higher than for normal usage due to lack of manoeuvrability
  - on heavily trafficked footways, risk probability the same across the full width, due to the high pedestrian flow across the whole width

on lightly trafficked footways, risk probability higher for the flow zone (the area generally used by the pedestrians), the rest of the footway being relatively unused – risks are assessed for both zones.

- *open joints etc:*
  - directly comparable with risks attributable to trips, except that probability and impact are lower (assumed to be easier to avoid and less damage likely).

## Pedestrian crossings

- *trips etc:*
  - any controlled pedestrian crossing (zebras or green man controlled) – refer to applicable footway category risk

## Cycle routes

- *potholes etc:*
  - the greater the severity of defect, the greater the impact
  - probability remains the same irrespective of the cycle route category
  - cycle lanes in carriageway – as per carriageway risks as they are based on cyclists.

## Kerbing

- *dislodged etc:*
  - risks for all defects are based on pedestrians rather than other road users as they are considered greater
  - impact and probability risks as per footway trips.

## Drainage

- *blocked gully etc:*
  - blocked gullies and channels refer to the risk caused by standing water or ponding in carriageway channels
  - risk based on motor vehicles with probability assessed as the same for all categories – local roads, although having less traffic, have a greater likelihood of flooding due to a lower level of maintenance
  - flooding risk in carriageway treated the same as a blocked gully
  - flooding in footways not a safety issue – it is a serviceability issue not to be considered as a safety defect.
- *damaged gully grate etc:*
  - risk based on cyclists and motor vehicles – high probability both for cyclists and both travelling and parking motor vehicles
  - impact for cyclists as for carriageway potholes
  - impact for motor vehicles assessed as high due to possibility of occasioning further damage to grating leading to collapse.
- *missing gully grate:*
  - catastrophic risk under any circumstance.

## Road markings, roads studs

- *faded lines etc:*
  - impact as for carriageway potholes
  - probability significantly higher for warning lines than for other lines, as such defects are far more likely to lead to accidents being caused only 30% effective loss considered as a risk, as a greater loss is not likely to be significantly different in terms of risk.
- *missing road studs:*
  - the loss of individual studs is of little consequence, except as follows
    - if a large hole is left, this should be treated for risk as a carriageway pothole – if a road stud is left lying in the highway, it should be removed forthwith
    - should there be multiple studs missing, the inspector may raise the risk level if it is considered that there is a safety issue.

## Bollards, guard rails, barriers, fences

- *all defects:*
  - nearly all items are located in the footway for the purpose of pedestrian safety, with defect risks comparable to footway risks.
- *damaged item etc:*
  - with a wide range of defect severity, location & hierarchy a medium probability risk has been evaluated as a general rule – an inspector may reassess the risk if deemed appropriate.
  - with a wide range of impact risk due to numerous different circumstances, a medium risk has been evaluated as a general rule, except in the case of bridge parapets where an extremely high impact has been evaluated – as above, the inspector may reassess the risk if circumstances warrant.
- *missing item:*
  - as for damaged items, there is a wide range of risk possibilities, probability again being treated as a medium risk
  - as it is considered that, in general, impact severity for missing items is higher than for damaged items, a general impact assessment of high is used.

## Non-illuminated signs

- *damaged signs:*
  - wide range of risks dependant on circumstances – in general, risk assessed as being similar to a missing item under bollards etc.
- *dirty signs:*
  - in general, risk assessed as lower than for damaged signs, except in the case of warning signs, which by their very nature, constitute a higher risk than other signs.
- *missing signs:*
  - risks assessed the same as for dirty signs.

## Street name plates

- *all defects:*
  - as these items are normally located at the back of footway, the probability risk is lower than for other signs
  - impact risk is assessed as being similar to other non-warning type signs.

## Street furniture

- *damaged item etc:*
  - with a wide range of items and defects, in general, probability risk assessed as low as items are normally easily visible
  - impact risk likely to be high, assessed as comparable to damaged signs.
- *missing item:*
  - assessed as a higher probability risk, due to the possibility of tripping over exposed bolts etc.

## Highway general

- *presence of ice:*
  - in extreme circumstances, this could be a highly dangerous defect needing immediate attention, in others it may only be a minor problem – the Inspector must decide action to be taken based on the unique conditions appertaining at the time.
- *anything else considered hazardous:*
  - the risk register identifies only typically encountered risks – other risks identified by the inspector must be assessed from first principles, having taken account of other risks in the risk register.

## **7.4 Continuous Improvement**

The defect assessment process will be reviewed and where applicable updated on an ongoing basis as part document production & business improvement commitment made by the Council in section 3 (Document Production & Business Improvement).

## 8 INSPECTIONS, WORKS ORDERING, AUDIT AND PAYMENT PROCESSES

### 8.1 Inspection Procedures

#### 8.1.1 Recorded During Safety Inspections

When a defect is identified by a highway safety inspector during a safety inspection the inspector will follow the process described in Appendix A.

#### 8.1.2 Reported by Third Parties

When a defect is reported by a third party (example, a member of the public) the highway safety inspector will follow the process described in Appendix A.

#### 8.1.3 Utility Apparatus Defects

When a utility works defect is identified by a highway safety inspector during a safety inspection the inspector will follow the process described in Appendix A.

#### 8.1.4 Emergency Defects

When an emergency defect is identified a highway safety inspector will be assigned to investigate the issue and will follow the process described in Appendix A.

#### 8.1.5 Insurance Claim Defects

When an insurance claim defect is identified a highway safety inspector will be assigned to investigate the issue and will follow the process described in Appendix A.

#### 8.1.6 Audit of Completed Works

When list of completed jobs submitted for payment a highway safety inspector will be assigned to carry out an audit of completed works and will follow the process described in Appendix A.

#### 8.1.7 Rejected Jobs

When a highway safety inspectors receive notification(s) from direct labour organisation for rejected job(s) they will follow the process described in Appendix A.

#### 8.1.8 Procedure for rejecting jobs Contractor

When the appointed Contractor decides to reject a given work instruction highway team requires to be notified by following the process described in Appendix A.

#### 8.1.9 Reactive repairs with variations

Some work instruction received by the Contractor may require alterations at the time of carrying out the work on site. On these occasions the Contractor will follow the process described in Appendix A.

#### 8.1.10 Payment application process

When application for payment is received, highway safety inspector will follow the process described in Appendix A.

## 8.2 Defect Marking and Measurement

All defects should, where possible and safe to do so, be marked in orange spray paint or crayon. The defects should wherever possible be marked as outlined below, -

Void to be filled	-	Mark inner perimeter
Excavation and reinstatement (small)	-	Mark rectangle around it
Excavation and reinstatement (large)	-	Mark corners
Modular paving		Repair = 'dot'
		Replace = 'cross'

Carriageway defects should only be marked and measured when safe to do so. On heavily trafficked roads or where there are poor sight lines or visibility highway inspectors should not attempt to mark and measure the defects. Instead a best estimate of size should be made without venturing into the carriageway. When recording the defect, the description should clearly state that the measurements have been estimated.

Where possible and safe to do so the depth, height and area of a defect should be measured using a tape measure to allow an accurate measurement to be obtained.

## 8.3 Continuous Improvement

Inspection processes will be reviewed and where applicable updated on an ongoing basis as part document production & business improvement commitment made by the Council in section 2 (Document Production & Business Improvement).

## 9 HIGHWAY SAFETY INSPECTORS

### 9.1 Core Duties

The training provided by the Council will ensure that each highway inspector is aware of their duties. Highway inspector duties include, but are not limited to, the following:

- Inspect and monitor the Council's highway network to ensure it is maintained in a safe and serviceable condition and take action for non-compliance under Highways Act;
- Inspect the integrity and structure of the Council's highway network, determine any appropriate remedial action that is required and raise task orders instructing the Council's contractor to take action
- Inspect and monitor our highway contractor's work on the public highway to ensure compliance with permit requirements and the Council's network management responsibilities
- Inspect and monitor the Council's highway networks street trees for defects
- Communicate effectively with highways traffic and highways improvement colleagues and stakeholders in the delivery of the service
- Keep accurate records of inspections and update Highways records.

Provide advice to the Council's highway maintenance operations team and to service colleagues, elected members, internal departments and members of the public and ensure effective communication with all stakeholders.

### 9.2 Competency and Training

The Council do ensure that all staff engaged in highway safety inspection works are suitably competent, experienced, and trained.

The Council employs a programme of Continuing Professional Development and training for all directly employed safety inspection staff. This will include:

- Formal and structured learning / classroom based with approved supplier
- Learning from peers
- Work experience
- Periodic review and formal staff appraisals.

The Council maintain a record of all training and development for directly employed safety inspection staff.

Highway inspector competence is assessed in accordance with the 'Highway Inspector Competence Framework- June 2019' and placed on the Highways Inspector Register.

If the Council employ contractors to complete safety inspections the Council will ensure that they provide evidence of the appropriate competencies of their staff.

## 9.3 Inspection Equipment

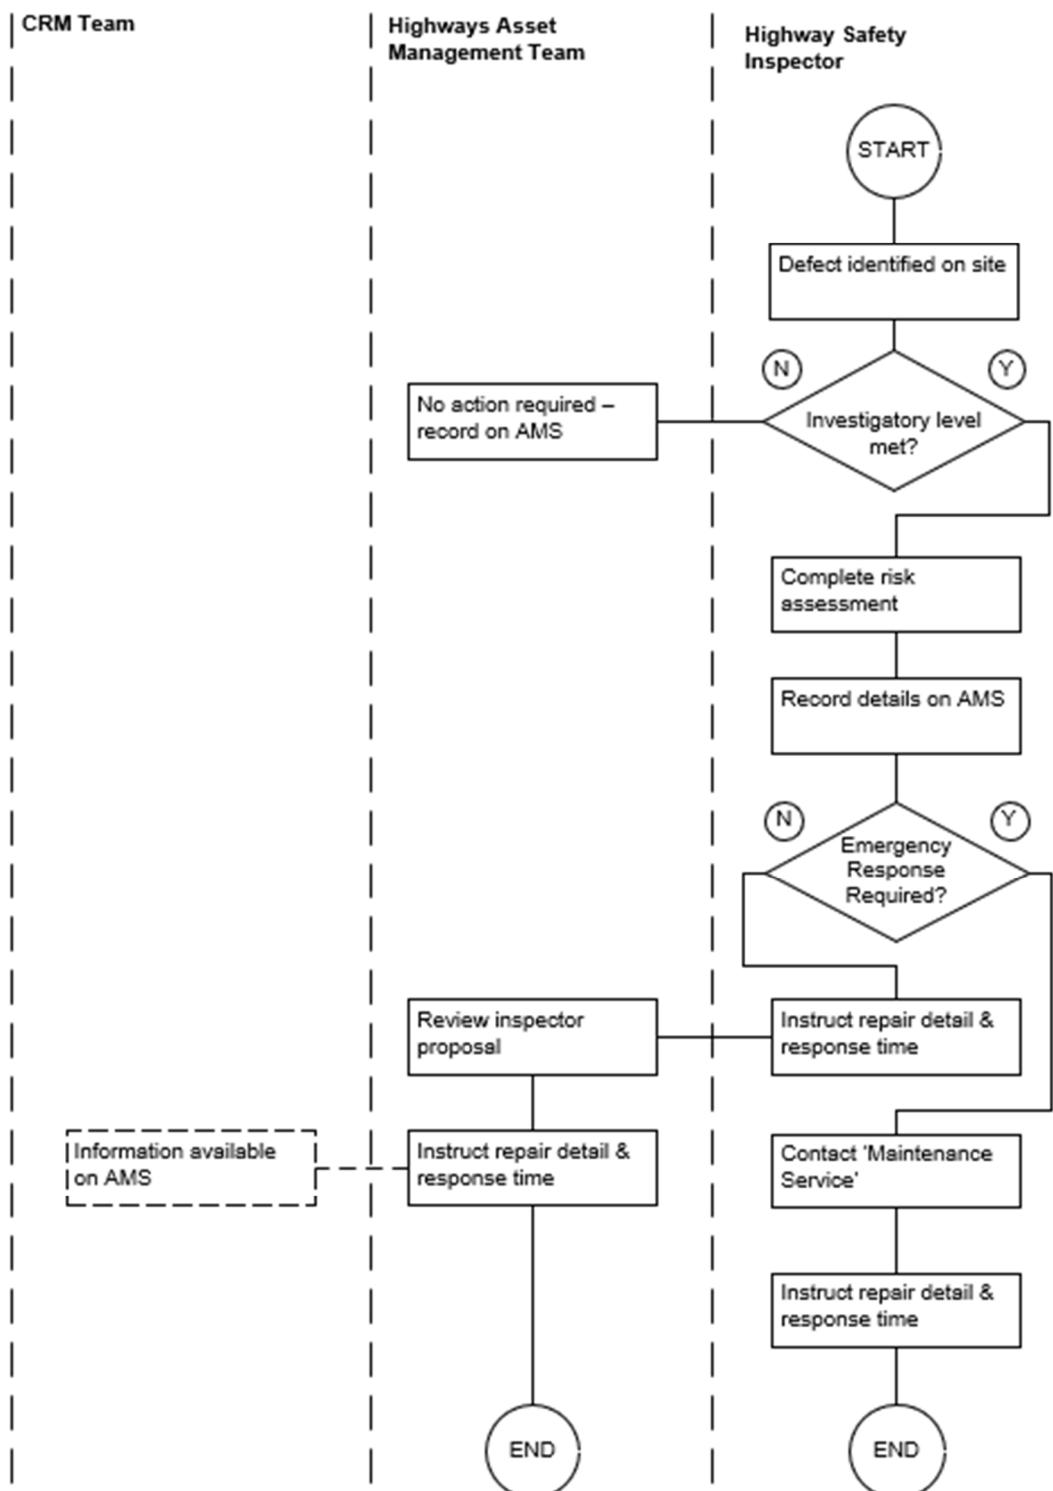

Each highway inspector will carry the following equipment when carrying out highway safety inspections:

Personal Protective Equipment (PPE)	- in accordance with Council's Health and Safety Policy
Communication (mobile phone/tablet)	- Mobile phone
Measurement	- Tape measure, spirit level
Site markings	- Orange spray paint, chalk or crayon
Health & Safety	- Point of work risk assessment template

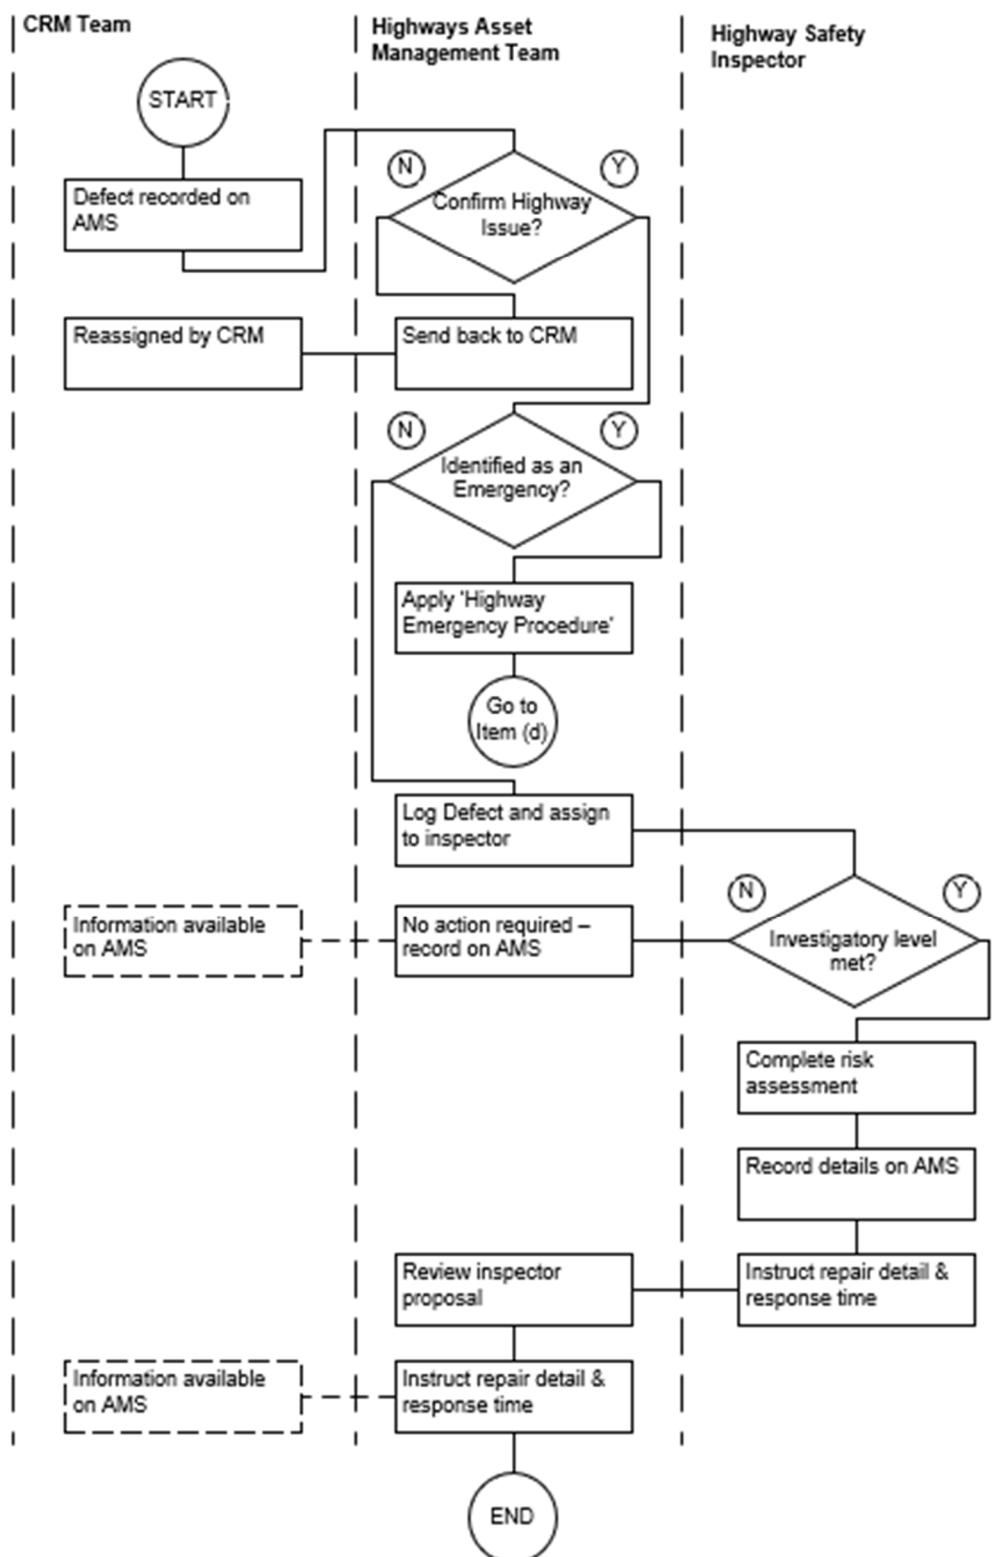

## Appendix A (Inspection Procedures)

- (a) Defects Recorded During Safety Inspections
- (b) Defects Reported by Third Parties
- (c) Utility Apparatus Defect Reports
- (d) Highway Emergency Defects
- (e) Insurance Claims
- (f) Audit of Completed Works
- (g) Rejected Jobs
- (h) Procedure for rejecting jobs (Contractor)
- (i) Reactive repairs with variations
- (j) Payment application process
